Vehicle Wash

Agricultural

Commercial

Dear [[First Name]],

Welcome to NUFORM News by [NUFORM Building Technologies Inc.](#) NUFORM is an innovative, quality-driven building technologies company.

Through our newsletter we hope to provide you with regular updates on our industry leading products, [CONFORM™](#), [RELINE™](#) and [RENU™](#), ideal for your building needs. [CONFORM™](#), our patented concrete wall forming system is revolutionizing the building industry and making it easy for all businesses, large and small, to build solid, cost-efficient structures.

Our [RELINE™](#) and [RENU™](#) products have been used to line and refinish the interior of thousands of agricultural, vehicle wash and commercial facilities across North America.

Feature Product - RENU™

Specifically designed for vehicle wash interiors built using CMU construction, these innovative, lightweight panels fasten directly to an existing wall or ceiling. [RENU™](#) panels are reversible, making it an ideal product for self serve bays and other areas of your car wash that take abuse.

Features:

- Withstands harsh chemical cleansers and outperform fiber-reinforced panels (FRP) and fiberglass spray
- Superior long-term performance and virtually maintenance-free

- Brightens the interior appearance of the building
- Innovative built-in expansion joint so panels will not warp
- Panels will not rust or corrode and never need to be painted!
- Trim and accessory components available
- Ideal for new construction or renovating existing structures

Featured Project

Project Name: [KE Bushman's Winery and Celebration Center](#)

Project Location: Tyler, Texas

Project Description:
12, 600 sq.ft of CF6 [CONFORM™](#)

Owner: Pierre de Wet

With the glowing KE brand lighting the front of the building, KE Bushman's stands out among the cattle pastures outside Tyler, Texas. Completed in July 2009, KE Bushman's is a [Winery and Celebration Center](#) that used NUFORM's line of building products extensively to clad the structure. KE Bushman's chose the [CONFORM™](#), product for its low install cost, ease of cleaning and for its durability over time. The added reduction in heating and cooling costs was also a factor in a building that has as it's main focus, one large open space for banquets or large parties.

This 23,000 square foot facility, with custom cut archways and walls as high as 32 feet, took three days to erect and brace the [CONFORM™](#), wall and three more days to pour concrete. Labor costs associated with traditional framing of a building of this size would have been about three times the amount spent. The end result is a clean, statuesque building that will stand the test of time. Owner Pierre de Wet stated, "I think we can fit a lot of people in here as an evacuation shelter." Well if it doesn't work out for concerts or wedding receptions, that might just be a plan.

Nuform Tech Tip

When mounting light to medium weight signs, brackets to equipment over RENU™ or RELINE™ panels, plastic spacers are required to permit anchorage to the underlying wall behind the panels. The spacers prevent crushing of the panels when the anchors are tightened.

The 1" diameter PLASTIC SPACERS are available from NUFORM BUILDING TECHNOLOGIES INC. and can be included with your panel and trim order. The spacers are 7/8" deep or 3/8" deep to suit the RENU™ and RELINE™ panel respectively.

The spacers are installed by drilling a 1" diameter hole through the panel to the underlying wall. The spacers can accommodate anchor bolts up to 1/2" diameter. To maintain a water resistant surface, apply a bead of approved sealant around the spacer to the face of the RENU™ or RELINE™ panel.

Contact your NUFORM™ Sales Representative for more information or visit the [technical](#) page on our website.

Upcoming Events

Please visit the NUFORM Team at one of the following trade shows near you in April, May, June and July 2010. We look forward to meeting you.

Tradeshow	Location	Booth#	Show Type	Date
Poultry Industry Council Show	London, ON	101J	Agricultural	April 14-15
CARWACS	Calgary, AB	1015	Car Wash	April 14-15

The Canadian Plastics Industry Association

CPIA's New User Friendly Web Site

By Darlene Gray, Web and Communications Specialist

We invite you to visit CPIA's new web site located at www.plastics.ca. The new CPIA site has been configured to help enhance the industry's reputation with media, government, consumer and government constituents and is a resource with a wealth of information for the plastics industry. In addition, the site provides CPIA members with easy access to tools that will help them to enhance their businesses.

If you have any questions regarding the site, please contact CPIA at 905.678.7748 ext. 239 or [e-mail us](mailto:info@nuformdirect.com).

Every NUFORM News newsletter will feature a project that utilizes one of our products. If you have a project you would like featured in an upcoming NUFORM News newsletter please forward your pictures or email us at info@nuformdirect.com. We'd love to see your project!
