

### Wall Dimensions vs. Components Chart

The components of CONFORM® that are required for a **measured dimension from a panel web to a box connector web** are noted in the following chart.

For a **measured dimension from a box web to a box web**, add 100mm to the measurement and delete one box from the solution. Refer to the DESIGN GUIDE for component identification.

The following chart lists all combinations from 0.0mm to 1061mm using U250, BCS100, P232, P182, P93 and up to 6 spacers either S49 or S68. However, combinations are not included with a P182 + S49 or P93 + 2-S68, since a P232 is used instead. Also, combinations are not included with a box connector and box joiner, since 2-S68 are used instead.

Wall Dimension From Box Connector to Panel
